Agile Visualization

Agile Visualization

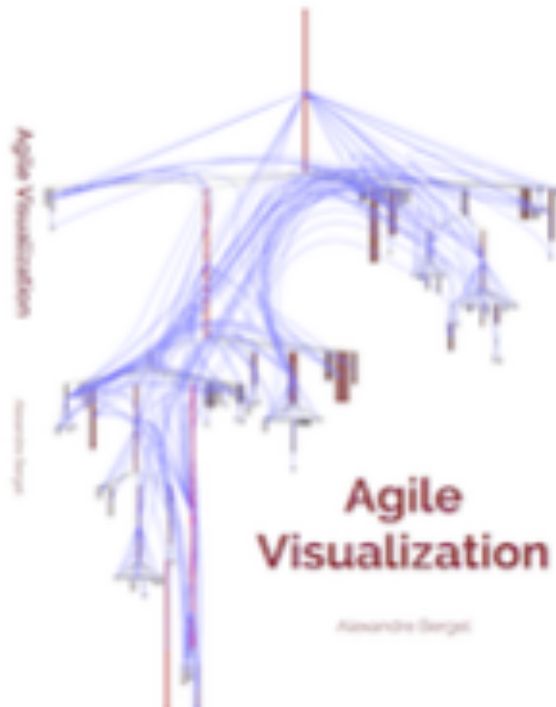

Crafting a visualization requires short and incremental developments often costly both in time and effort. Agile Visualization promotes the use of the Visual and Pharo interactive development environment to significantly reduce the creation of a visualization. Visual significantly leverages a visualization development against traditional visualization frameworks and tools.

This book focuses on the Visual visualization engine. Agile Visualization first presents the basic and necessary tools to visualize data. The development environment is subsequently described. The book then covers a domain-specific language, frameworks to design and implement interactive and composite visualizations. Several applications are presented covering epidemiological models, geographical information, network latency and source code software analysis.

Agile Visualization covers aspects that are relevant for practitioners, business, and academics to successfully design and implement a visualization.

Alexandre Bergot is Assistant Professor and Associate at the University of Lille. Alexandre Bergot and his collaborators are an expert in software engineering and software quality, more specifically in code profiling, testing and data visualization.
