## Features

### How to display an object as a string: printString and displayString 4

*Bobby Woolf*

Objects are often identified using a string that describes the object. Bobby offers some guidelines on how to implement and use printString and displayString to produce an object's description.

### Smalltalk SQA—The Public/Private Problem #2 9

*Jeff McKenna*

Jeff explores the public/private problem, proposes a solution, and then describes how to use the solution to define a unit, interface, and aggregate testing.

### Proper use of class methods 12

*Jill Nicola*

Using class methods for creating new objects, managing class variables, and building test objects.

### Implementing mixins in Smalltalk 14

*Terry Montlick*

A simpler, more pragmatic approach for working with mixins.

## Columns

### Managing Objects 16

*Smalltalk as an Internet server*  
*Jan Steinman & Barbara Yates*

Mainframes and terminals are tired, client-server is wired. With a simple TCP-based server framework, you can concentrate on

the service you provide, without getting bogged down in server details.

### Getting Real 21

*Communicating between sessions*

*Jay Almarode*

Jay discusses two kinds of client-to-client communication that can be supported by multi-user Smalltalk and shows how to use these services to implement concurrent processing algorithms.

### Visual Programming 24

*Reusable components*

*Dwight Deugo & Wayne Beaton*

Deugo and Beaton describe the building blocks for constructing any application window: parts and corrections.
